- 1x connector f. cigarette lighter adapter
- 2x output DC12V f. TFT and CarPC
- PC does not reboot on engine start
- CE, E1 ,IP54

With Auto-Start and -Shutdown function !
There is only one cable (1-wired) needed for realizing this function. This cable has to be connected to the PWON-jumper of the mainboard. After you started the engine (battery voltage rises to 13.8V), the computer will receive a signal and boot up. When you turned off the engine (battery voltage 12.0V again), the PC will receive a signal to shutdown. And after additional 45 seconds, the power supply will be turned off hardly.
